

THE **MicroMaster²** LAUNDRY SYSTEM

An unbeatable combination of washer-extractors and tumblers equipped with microprocessors designed to meet the exact needs of your laundry operation.

Today's on-premises laundry rooms need laundry equipment that is flexible, reliable, and delivers excellent cleanability every time.

The MicroMaster2™ Laundry System from Speed Queen does just that.

Speed Queen has developed a system of washer-extractors and tumblers that work in harmony with each other to fulfill these basic needs and to exceed expectations.

User-Friendly Readout & Ergonomic Design

A large digital cycle readout displays cycle selections, time remaining and temperature readout in Fahrenheit or Celsius. The user-friendly design keeps operators informed about the cycle status. For increased productivity, a convenient time remaining readout allows operators to accomplish other tasks while the washer-extractor is operating. The digital cycle counter enables owners to audit machine usage for more efficient laundry room management.

An ergonomically-designed touch pad makes cycle selection a breeze! The color-coded start and stop buttons make the control easy to use. The MicroMaster2 four digit display gives operators more immediate information on cycle progress. And with the rapid advance feature, operators can advance the cycle to add forgotten linen. The one touch selection pad increases operator efficiency because operators can program the control to easily repeat their last cycle.

Flexible Programming

The Speed Queen MicroMaster2 Laundry System for washer-extractors and tumblers offers versatile programming for a wide range of options. The washer-extractor features 30 cycles with 11 steps per cycle to deliver the best care for your fabrics.

MicroMaster2 tumblers are equipped with an automatic drying cycle or a time dry option. When an automatic cycle reaches the factory-set or programmed dryness level the tumbler stops drying and the cool down process begins. Time dry lets you determine the amount of time needed for drying, depending on the dryness level required.

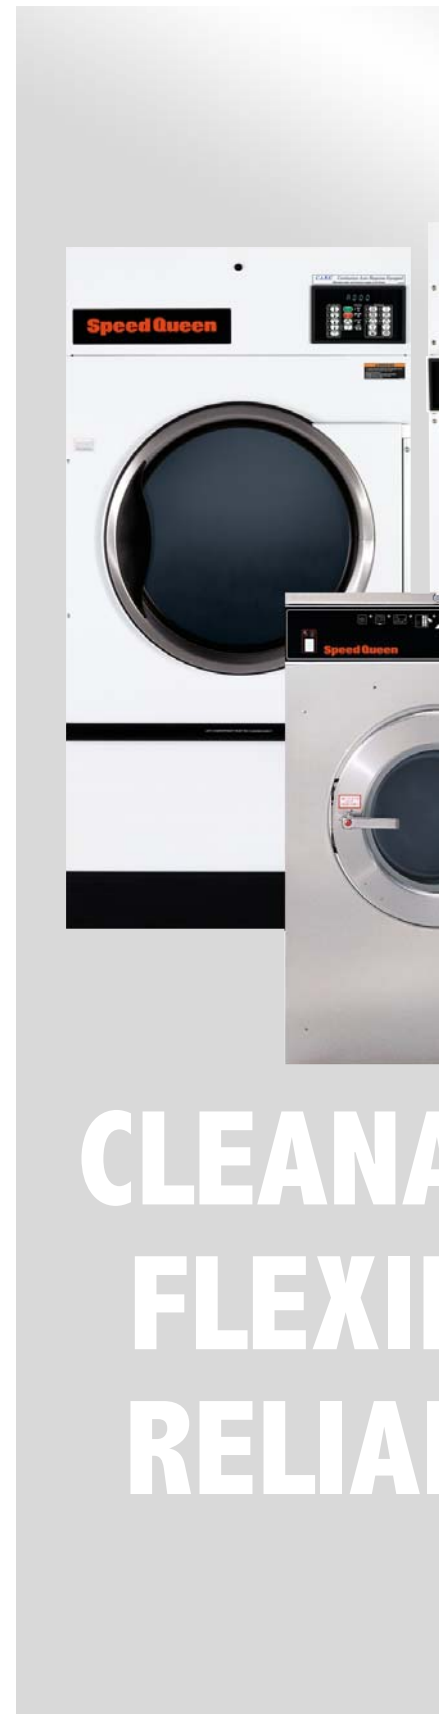

Both drying options have factory pre-set cycles. In addition, other cycles can also be created and frequently used cycles can be saved as custom programs.

Extend Linen Life

Linens last longer when they receive the right care. MicroMaster2 combines cycle flexibility with programmable water temperatures for excellent fabric care and more efficient usage of laundry chemicals.

On MicroMaster2 tumblers fabric type can also be a cycle selection. Choose preset "ideal" temperature for cottons, permanent press, mixed, delicates, and no-heat make drying easier.

Cycle indicator lights inform users of drying cycle status and when door is ajar.

ABILITY
ABILITY
ABILITY

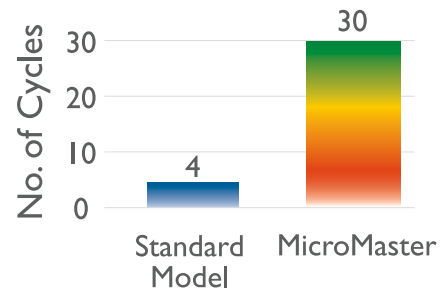

6-Speed Wash & Automatic Drying Cycle

The variable frequency drive washer-extractor model is our most innovative feature, allowing precise control of motor speeds and direction. Six-speeds provide maximum flexibility and three extraction options are ideal for a variety of fabrics from the hardest to clean to the most delicate washables. The three user selectable extract speeds maximize efficiency and result in less water retention and quicker drying times.

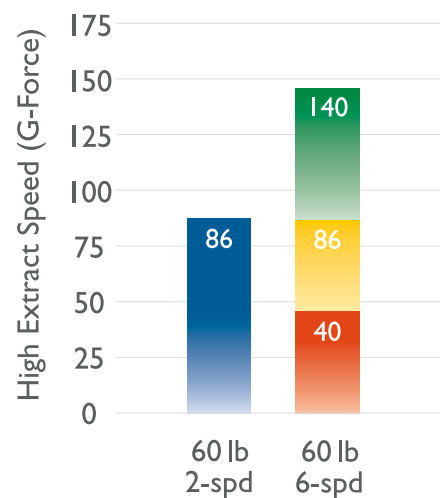

Extract speeds available include: A gentle extract of 40 G's for delicate fabrics; 86 G's for permanent press with virtually wrinkle-free results; a medium extract of 140 G's for mattress pads, blankets, spreads, and other hard to dry items. Less retention results in quicker drying times and reduces utility costs by as much as 40%.

Once fabrics are transferred to the tumblers, the options don't end. Choose from Time Dry, Auto Dry, or select the Special Cycles to customize the dry cycle to your needs. For greatest energy efficiency, the Auto Dry cycle senses drying progress and ends the cycle when the desired dryness level is reached. No energy is wasted and fabrics are not damaged from overdrying. For unique OPL drying applications, all Special Cycles allow you to customize the temperature from 80°F (27°C) to 180°F (82°C). Special Auto Cycle actually allows you to select the number of times the tumbler will cycle from heat-on to heat-off for optimum fabric care.

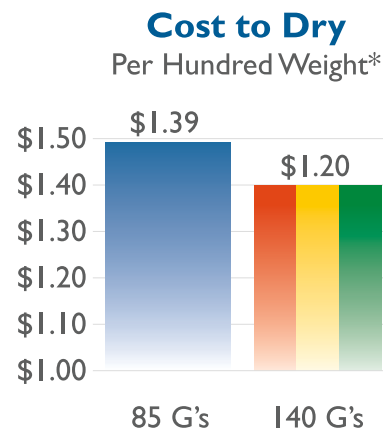

... flexibility

... efficiency

... save money

* The laundry operating cost projections are based on normal machine operating performance and national average utility rates. Due to the many variables involved in each part of the operation, the figures are intended as an estimate only.

Reliability

3-Year Warranty

At Speed Queen we're so confident that our washer-extractors and drying tumblers are built better to last longer and we're offering the following limited warranties to prove it.

Washer-extractor: Through three years* any part on the entire machine. Through five years* the bearings and bearing seal assembly. Through five years* the frame, cylinder and shaft assembly. **Tumblers:** Through three years* free replacement for any part of the drying tumbler which fails as a result of a defect in material or workmanship after the date of original installation.

* Parts only, labor not included. See Speed Queen Warranty Bond for specifics.

Washer-Extractors

Stainless Steel Construction

Durable stainless steel cabinet front, top and sides as well as inner and outer tubs won't corrode, chip, crack or pit in normal use, and they're extremely rust resistant. In fact, Speed Queen washer-extractors will maintain their lustrous appearance for years to come.

Tumblers

Reversing Cylinder Option

A reversing option prevents tangles in large loads. Sheets, blankets and other oversized items stay separated and dry evenly.

Security Option

The security "lock out" option prevents operators from altering preset cycles. When lock-out is used, the operator can select from the factory-set automatic cycles and the one custom cycle allowed per select pad.

MicroMaster2 is available on the following:

- Washer-extractors 20-125 lb capacities
- Drying tumblers 25-170 lb capacities
